

ردیف	مبدأ	مقصد	پورت / پروتکل	توضیحات
1	Kaspersky Administration Server	Domain Controllers	tcp/389, udp,389	LDAP over TCP or UDP
			tcp/636	LDAP over TLS
			tcp/53, udp/53	DNS
2	Kaspersky Administration Server	Clients	icmp	Discovering new clients (Network Pool)
			tcp/139, tcp/445, udp/137, udp/138	Remote Installation of Network Agent
			udp/443	SMB over QUIC
			tcp/135	RPC Server
			udp/15000	Management signals from Administration Server or Distribution point to Network Agents
3	Clients	Kaspersky Administration Server	tcp/13000	Receiving connections from Network Agents
			udp/13000	Receiving information about devices that were turned off from Network Agents
			tcp/14000	Receiving connections from Network Agents
			tcp/13111	Receiving requests from managed devices to KSN proxy server
			udp/15111	Receiving requests from managed devices to KSN proxy server
			tcp/17000	Receiving connections for application activation from managed devices
			tcp/19170	Tunneling connections to managed devices by using the klsctunnel utility
			tcp/8060	Transmitting published installation packages to client devices
			tcp/8061	Transmitting published installation packages to client devices (TLS)
4	Admin Devices	Kaspersky Administration Server	tcp/13291	Receiving connections from Administration Console to Administration Server
			tcp/8080	Receiving connections from browser to Kaspersky Security Center Web Console
5	Kaspersky Secondary (Slave) Administration Server	Kaspersky Master Administration Server	tcp/13000	Receiving connections from Secondary Administration Servers
6	Kaspersky Master Administration Server	Kaspersky Secondary (Slave) Administration Server	tcp/13000	Connecting to Secondary Administration Servers
			tcp/13291	Adding a new Secondary Administration Server (to get the Secondary Administration Server's Certificate)
7	Distribution Points	Clients	udp/15001	Receiving multicast requests from a distribution point (if in use)
8	Kaspersky Security Center Web Console	Kaspersky Administration Server	tcp/13299	Receiving connections from Kaspersky Security Center Web Console to the Administration Server; receiving connections to the Administration Server over OpenAPI
